Description

Firing range: 1080-1100C - brush on earthenware glaze.

*This glaze is NOT suitable for food or drink vessels as it contains lead bisilicate frit. Recommended for decorative use only.

Manufacturer's instructions:

Shake or agitate the container vigorously, then stir, before use. Apply one even coat with a soft brush, let the "wet" look disappear, then apply a second coat in the opposite direction. When the second coat has lost its "wet" look, apply a third coat in the same direction as the first.

**Please note: a thick application is needed to create the gold effect.

Keep lid tightly closed during storage and if thickening occurs add a SMALL amount of water.
