### Description

Firing range: 1040-1120C - brush on earthenware glaze.

#### Manufacturer's instructions:

Image shows stain rubbed into surface to highlight crackle effect! Glaze crackles more on basic, less refined clays. Not recommended for food and drink containers due to the crackles.

Shake or agitate the container vigorously, then stir, before use. Apply one even coat with a soft brush, let the "wet" look disappear, then apply a second coat in the opposite direction. When the second coat has lost its "wet" look, apply a third coat in the same direction as the first.

Keep lid tightly closed during storage and if thickening occurs add a SMALL amount of water.
