Description

Fine wire tools for sgraffito carving and relief work – 5 piece / double sided tool kit

Scratch the surface of stunning ceramic designs with fine and precise wire sgraffito tools.

Sgraffito (Italian word 'to scratch') is a surface decorating technique in pottery that is produced by applying one or more layers of colour (underglaze, slip or engobes) on to leather hard clay, then scratching and carving patterns, textures and illustrations to reveal the contrasting colour of the clay underneath.

Creativity and artistry

These sgraffito wire tools will enable you to create fine and precise carved images on the surface of your leather hard pots, adding more dimension and vibrancy to your pottery.

Fine and detailed carvings

The variety of 10 (5 x double sided tools) wire loop shapes and sizes within this tool kit will broaden your scope for creating fine and detailed carvings.

Ergonomic design

The textured grip and comforting weight of the metal handle make these tools easy and enjoyable to use.

Dimensions: Tools are 15-15.5cm long and less than 1cm diameter. Each tool weighs about 25g.
