Description

Firing range: 1040-1120C - brush on earthenware glaze.

* Image shows stain rubbed into the surface of a glaze fired piece, to highlight the crackle effect. This glaze will crackle more on basic, less refined clay bodies. NOT recommended for food and drink vessels due to the crackling nature of this glaze.

Manufacturer's instructions:

Shake or agitate the container vigorously, then stir, before use. Apply one even coat with a soft brush, let the "wet" look disappear, then apply a second coat in the opposite direction. When the second coat has lost its "wet" look, apply a third coat in the same direction as the first.

Keep lid tightly closed during storage and if thickening occurs add a SMALL amount of water.
