Description

Firing range: 1080-1100C - brush on earthenware glaze.

Manufacturer's instructions:

This glaze now contains blue organic dye that acts as a colour identifier for ease of application on white bodies.

This is a beautiful, translucent (not clear) satin glaze. When applied thinly you can see the appearance of decoration underneath the glaze - similar to frosted glass.

Shake or agitate the container vigorously, then stir, before use. Apply one even coat with a soft brush, let the "wet" look disappear, then apply a second coat in the opposite direction.

Keep lid tightly closed during storage and if thickening occurs add a SMALL amount of water.

Food safe - no lead frit is used in the manufacture of this product.
