Description

Synthetic round sponge – the classic workhorse in every pottery studio

Durable and absorbent

Round sponges are the traditional choice for potters. This sponge is made from synthetic material making it durable and absorbent. It will tirelessly soak up excess water from your projects for a long time.

Smooth finish – every time

This sponge's fine texture makes it perfect for smoothing and refining the surfaces and joins of your pottery projects. Stiff and dense, it can handle even the heaviest of groggy clay bodies.

Creative versatility

A synthetic sponge is the classic workhorse in every pottery studio. Use it for adding or removing water to your clay, smoothing and refining, cleaning off excess glaze, or sponging glaze onto your pieces.

Sponges: Round Sponge

Diameter: 75mm. Thickness: 30mm
